

Amphitheater

The woodland amphitheater will be located along one of the ADA trails near the Environmental Education Center. It will seat approximately 150 people and provide wheelchair access along the upper row and down to the stage. As the proposed location is quite shady, the seating rows will consist of a recycled synthetic turf. This turf closely resembles grass in texture and color, but greatly reduces maintenance costs and follows more closely with the LEED philosophy of using recycled materials. The stage should be covered to provide shelter and protection for any lighting or sound equipment. Storage for lighting, sound, sets, etc... will be provided behind the backdrop in a secure storage room. Additionally, the backdrop will feature a drop-down screen for video projection.
